Introduction

Our project create a Class diagram for a library management system.

The system is designed to handle users, books, librarian, and borrowing with penalties.

Users can request to borrow a book and librarian can either approve or reject the request. Librarian can also make a few actions such as add new book, remove books, etc. And they can also create a penalty ticket incase of a late return.

Requirements

- Users can request to borrow a book
 - Librarian can add new books, remove books, approve borrow, reject borrow.
 - Librarian can make a penalty ticket for transaction that borrow return late.
 - Users pay for the penalty fee.
 - There are different type of users such as Students and Guests.
 - The system need to keep track of books information like ID, Titles, etc.
